CS6004NI

Course Work 1

Submitted By: Ishwor Thapa Magar
London Met ID: Enter ID Here

Submitted To: Ishwor Sapkota
Module Leader

Component Grade and Comments	
A. Implementation of Application	
User Interface and proper controls used for designing	User Interface is complete but not separated and have proper use of controls
Manual data entry or import from csv	appropriate use of data types but missing some properties required or missing CRUD operation
Data Validation	missing most of the validation
Enrollment Report & weekly report in tabular format	very poorly executed reports and data not shown accurately
Course wise enrollment report & Chart display	Very poorly designed and only contains one report format with in appropriate data
Algorithm used for sorting & proper sorting of data	Default sorting provided by .net is used
B. Documentation	
User Manual for running the application	User Manual is below average. Is textual only.

Application architecture & description of the classes ad methods sued	architecture is included and satisfactory descriptoin of class and methods used.
Flow chart, algoriathms and data sctructures used	average work with very limited explanation and missing diagramatic representation.
Reflective essay	Very poorly written

C. Programming Style

Clarity of code,Popper Naming convention & comments	very poorly written code and no comments at all
System Usability	very poorly developed application

Overall Grade:	D	D
-----------------------	----------	----------

Overall Comment:

Code should be self explainable with less comments. Need some proper naming of the component and require to add comments on required area.
In overall the code is working and all the functionality seems working and system can be used

Module Code & Module Title

CS6004NP Application Development

Assessment Weightage & Type

30% Individual Coursework

Year and Semester

2018-20 Autumn

Name: Ishwar Thapa Magar

College ID: NP04CP4A170052

University ID: 17030523

I confirm that I understand my coursework needs to be submitted online via Google Classroom under the relevant module page before the deadline in order for my assignment to be accepted and marked. I am fully aware that late submissions will be treated as non-submission and a mark of zero will be awarded.

Introduction

This is the coursework for the module Application development in which we have to designed a Student Information system. The feature mention in the coursework for the system are login, enrolling student, generating weekly enrolment report, bulk data import in csv etc which were the basic functionality to be added first in the system. The daily report data generated should be sorted by both first name and registration date of the student enrolled. Moreover, the system also consists of generating the chart of weekly enrolment report.

Current Scenario

Most of the education institute use old system for tracking the record of enrolment such as file-based record system in paper which increases the redundancy in data recording. On the other hand, the digital record tracking system used by the institute also are lacking the functionality in the system.

Proposed System

The proposed system that is going to be developed will help to solve those issues. The use can easily navigate the system as the graphical user interface will be design with flexibility. A security to the system will be added to safe the data from another user. The sorting features will be added for the easily navigating the data.

User Manual

The details instruction for the system is given below with screen shots:

The initial screen will be for the security purpose to bypass the system. The username and password are admin.

Figure 1: Login Screen

After the login process the main screen program of the system opens.

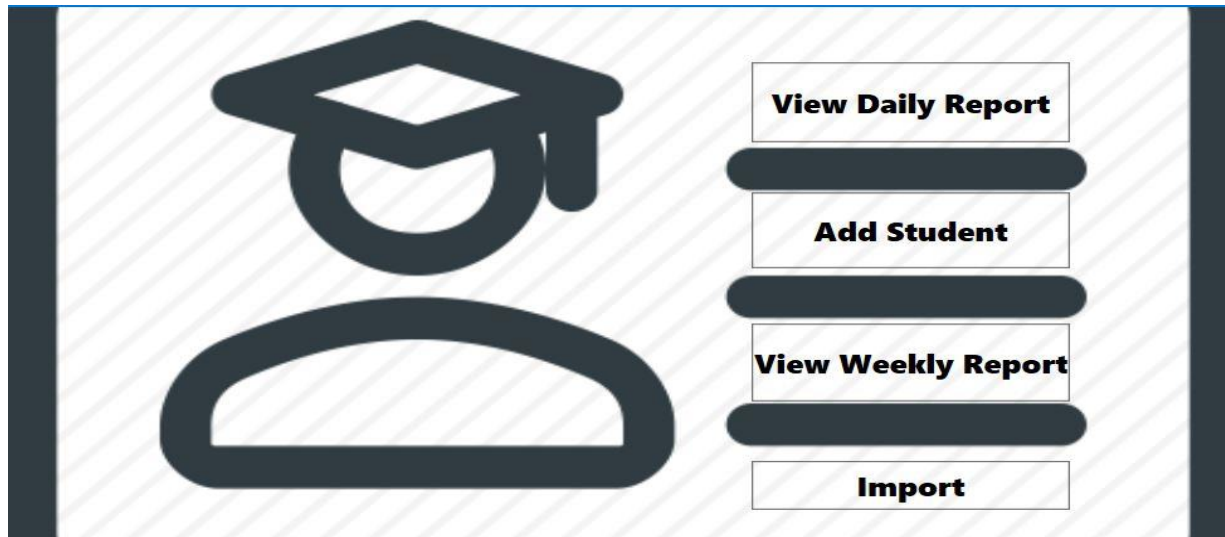

Figure 2: Main Screen

The main page has four features integrated in it. They are view daily report, Add Student, View Weekly Report and import.

To Enrol a new student the user has to click Add student which will redirect to the enrolling screen.

Figure 3: Enrol student Screen

As the user visits the Add student section there will be the form fill-up section for the enrolment.

While enrolling if the field were leave blank then the erro message will popup as a warning to enter the value.

The screenshot shows a web form for student enrollment. The form fields are as follows:

- Registration No : 235
- Address : (empty)
- First Name : Ishwor
- Contact : 986
- Last Name : (empty)
- Registration Date : 1/13/2020
- Course Enroll : Artificial Intellig (dropdown menu)

Buttons: Enroll Student, Clear All, Back To Home Page.

A warning popup is displayed with the message: "Fields should not be empty".

1	19030	Ishwor	Magar	Kathmandu	9851220847	Advanced Database
2	19031	Ujjal	Parajuli	Kathmandu	9851220847	Application Development

Figure 4: Validity Checking for empty textbox

After the valid entry of data the student will be enrol.

The screenshot shows a web application interface for student registration. It includes a form with the following fields:

- Registration No : 12434
- Address : Lakeside
- First Name : Min
- Contact : 9876554678
- Last Name : Tamang
- Registration Date : 1/29/2020
- Course Enroll : Advanced Data

Below the form are three buttons: "Enroll Student", "Clear All", and "Back To Home Page".

Below the buttons is a section titled "Currently Added File" containing a table with the following data:

ID	RegistrationNumber	FirstName	LastName	Address	ContactNo	CourseEnroll	RegistrationDate

Description of Methods

Login

Methods	Description
ProcessLogin	Contains all the validating process data for login
ErrorMess	It is used for displaying error message during the process login
btnLogin_Click_1	It is used to call process login module

Table 1: Login

Homepage

Methods	Description
AddStudent_Click	It is used for opening new window of AddStudent.
Btn_WeeklyReport	It is used for opening new window of WeeklyTabular Report.
Btn_Csv_Imp	It is used for opening new window of ImportCsv
Btn_Click	Used to open new window of daily report.

Table 2: Home page

AddStudent

Methods	Description
Startup()	It will create the xml file if not found and populate with some sample data during the start up.
AddsampleData	This method has the default dataset value during the initialization.
AppendStdReport	This method will take the value from the respected field from the user dynamically an create a row of student table in dataset.
Btn_Click_1	Used to open new window of daily report.
ClearControls	Contains the value for clear text box.
LoadStudentData	This method will search the xml file in the specific directory and if the file exists then it will read the xml file and populate the data in datagrid.
Btn_BackHome	This method will navigate from current window to homepage.
Btn_Clear	The method will call the ClearControl method.

Table 3: AddStudent

WeeklyTabularReport

Methods	Description
Btn_Back_1	This method will navigate back to the home page.
Btn_Weekly	This method will generate a weekly report of student enrolment from xml data file.
Btn_Chart	This will display a chart by reading the weekly report data..

Table 4: WeeklyTabularReport

Report

Methods	Description
Btn_Load_Daily_Report	This will retrieve the save xml data in the datagrid.
LoadStudentData	This method contain the functionality to read data and setting data to the datagrid..
Btn_Sort_First	This will sort the data in datagrid by the first name value
Btn_Sort_Date	This will sort the data in datagrid by the registration date of student enrol.

Table 5: Report

ImportCsv

Methods	Description
Btn_Csv	This method will help to import csv by selecting the csv file
Btn_Back3	This method will help to navigate back to the homepage.

Table 6: ImportCsv

Algorithm Description and Flow Chart

Student enrol Flowcharts

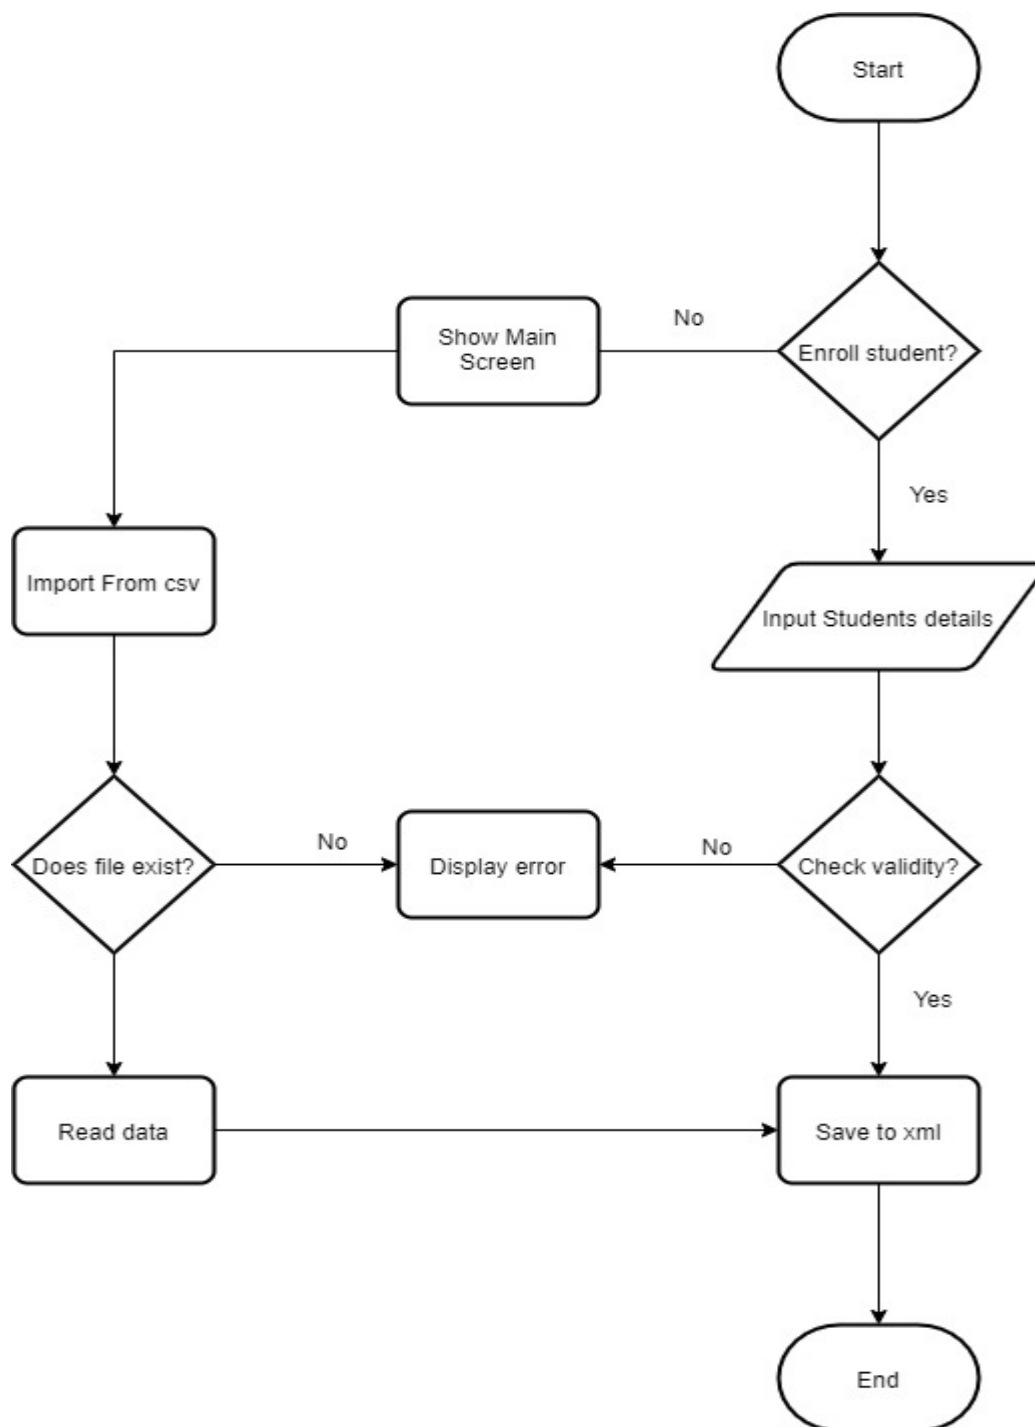

Figure 19: Student Enrol Flowchart

Description of Flowchart Algorithm**Student Enrol**Steps:

1. Start
2. Check if want to enrol or import from main screen.
3. If want to enrol add student details for Open student window and input students' details data or import the file.
4. Check validity for the input data.
5. If data is valid check save data to xml or display error message.
6. End.

Learning Reflection

The project developed is a fully digitized Student Information System. For the development of the project visual studio 2019 with WPF is used. WPF is the upgraded version of windows form for making desktop application. This framework was whole new different subjects for me in which I have researched more about using this framework for completing the project. During the project various things related to the project about creating a chart and then displaying it to the user was also challenging task.

The sorting algorithm in the data grid was a new term during this project. Moreover, the main task of the coursework was to import data and save that data in xml was a challenging task which I have successfully completed and gain the knowledge how the xml data is handled in the C# programming. The user interface of the system is made user friend where the user can easily navigate through the system. The exception handling is main for every program. The more knowledge about the exception handling and validating was also gained.

After all the overall evaluation of learning outcome was good during the project. This has help me for the further enhancement in programming.

Conclusion

The coursework of the module CS6004NP Application Development was to build up Student information system in windows presenter foundation. It was helps to sharpen the knowledge in C# programming and its real time world scenario. By building this desktop application the experience we get was a good one. Moreover, the knowledge about the git uses in the real time scenario was experienced. Describing about the project the project was successfully completed as per the criteria set by the project. More about the object-oriented programming in C# was learned.
